October 2023 data-update for "Updated science-wide author databases of standardized citation indicators"

Published: 4 October 2023 | Version 6 | DOI: 10.17632/btchxktzyw.6
Contributor: John P.A. Ioannidis

Description

Citation metrics are widely used and misused. We have created a publicly available database of top-cited scientists that provides standardized information on citations, h-index, co-authorship adjusted hm-index, citations to papers in different authorship positions and a composite indicator (c-score). Separate data are shown for career-long and, separately, for single recent year impact. Metrics with and without self-citations and ratio of citations to citing papers are given. Scientists are classified into 22 scientific fields and 174 sub-fields according to the standard Science-Metrix classification. Field- and subfield-specific percentiles are also provided for all scientists with at least 5 papers. Career-long data are updated to end-of-2022 and

single recent year data pertain to citations received during calendar year 2022. The selection is based on the top 100,000 scientists by c-score (with and without self-citations) or a percentile rank of 2% or above in the sub-field. This version (6) is based on the October 1, 2023 snapshot from Scopus, updated to end of citation year 2022. This work uses Scopus data provided by Elsevier through ICSR Lab (https://www.elsevier.com/icsr/icsrlab). Calculations were performed using all Scopus author profiles as of October 1, 2023. If an author is not on the list it is simply because the composite indicator value was not high enough to appear on the list. It does not mean that the author does not do good work.

PLEASE ALSO NOTE THAT THE DATABASE HAS BEEN PUBLISHED IN AN ARCHIVAL FORM AND WILL NOT BE CHANGED. The published version reflects Scopus author profiles at the time of calculation. We thus advise authors to ensure that their Scopus profiles are accurate. REQUESTS FOR CORRECIONS OF THE SCOPUS DATA (INCLUDING CORRECTIONS IN AFFILIATIONS) SHOULD NOT BE SENT TO US. They should be sent directly to Scopus, preferably by use of the Scopus to ORCID feedback wizard (https://orcid.scopusfeedback.com/) so that the correct data can be used in any future annual updates of the citation indicator databases.

The c-score focuses on impact (citations) rather than productivity (number of publications) and it also incorporates information on co-authorship and author positions (single, first, last author). If you have additional questions, please read the 3 associated PLoS Biology papers that explain the development, validation and use of these metrics and databases. (https://doi.org/10.1371/journal.pbio.1002501, https://doi.org/10.1371/journal.pbio.3000384 and https://doi.org/10.1371/journal.pbio.3000918).

Finally, we alert users that all citation metrics have limitations and their use should be tempered and judicious. For more reading, we refer to the Leiden manifesto: https://www.nature.com/articles/520429a

Department of Pure and Applied Physics

Guru Ghasidas Vishwavidyalaya
(A Central University)
Bilaspur (C.G.) – 495009, INDIA

About the University

Guru Ghasidas Vishwavidyalaya (GGV) is a Central University, situated in Bilaspur in Chhattisgarh State, established under the Central Universities Act 2009. Formerly it was known as Guru Ghasidas University (GGU), established by an act of the State Legislative Assembly, on June 16, 1983. GGV is an active member of the Association of Indian Universities and Association of Commonwealth Universities. It is situated in a socially and economically challenged area of Chhattisgarh State. The university is appropriately named after the great Satnami Saint Guru Ghasidas, who championed the cause of downtrodden and waged a relentless struggle against all forms of social evils prevailing in the then society. Vishwavidyalaya is now draws about 7000 students from different parts of the country. Apart from the regular academics in the campus, the university has successfully managed to extend its services for the welfare of society. The campus is lush green, calm and quiet and free from urban noise and pollution, an ideal temple for education and research.

About the Department

Department of Pure and Applied Physics, one of the premier departments of the University, was established in 1995. Since its inception, it has been actively involved in teaching and research activities. The department has grown by itself and emerged as the leader of science education in this region of central India. The department offers teaching and research programs in Experimental & Theoretical Condensed Matter Physics, Experimental Materials Science, Experimental Nuclear Physics, Spectroscopy, and Plasma Physics. The department offers wide-ranging courses, such as 5 years Integrated UG/PG program in Physics & Electronics, two years M.Sc. in Physics & Electronics, and an Integrated M. Phil. / Ph. D. (Physics). New specializations in Nuclear Physics and Laser Science are going to be offered in coming sessions at the Master's level along with the presently offered Material Science. Two M. Tech. level courses in Nuclear Technology and Nano-Science, and Technology will be started in the coming sessions. Department is having well-equipped laboratories for general physics, mechanics, heat and thermodynamics, optics, electronics, and computational techniques. Advanced material characterization facilities such as SEM, AFM, FTIR, UV - Vis spectrophotometer, and XRD.Department established a 3 MV high current pelletron accelerator facility. This facility will make us stand in the national science picture as one of the emerging research departments of the country. The department is having dynamic academic activity by coordinating regular seminars of eminent science personalities, workshops, and symposia which provide excellent opportunities, particularly to the UG/PG students of the department. Students from the department are encouraged to appear in national-level examinations like NET, GATE, JEST, etc. Department is striving very hard to improve the quality of Physics education to stand as one of the leading science education centers in the country.

About the Bilaspur City

Bilaspur is situated on the bank of river Arpa which has its own history in the holy books. The state capital Raipur is 111 kilometers from Bilaspur. It is the second largest city in Chhattisgarh and is known as NYAYADHANI because of the High Court of the state (largest High Court of Asia) being situated here. The South East Central Railway (SECR) Zone and South-Eastern Coal Fields Limited (SECL) have their Headquarters in this city. The city is surrounded by many historical places and temples; Siddha Peeth Maa Mahamaya at Ratanpur and Amarkantak which is the origin of river Narmada, life line river of Madhya Pradesh. Bilasa Devi Kevat Airport Bilaspur is the nearest airport to connect Bilaspur.

About Symposium

The International Symposium on **Recent Trends in Optical Materials and Photonic Devices** (RTOMPD) will focus on the research in the field of advanced optical materials, ultrafast optics, terahertz radiations, nanomaterials, vacuum technologies, photonic devices, and particle detector materials in nuclear physics, which should give significant advancement to the understanding of science and technology. In the international scientific community, one of the recent hot topics of research is related to generation and detection of terahertz radiations. The conference would address photonic approaches to direct terahertz generation, down-conversion from the visible regime by using nonlinear or photoconductive effects. There will be special emphasis on quantumcascade lasers, which are also popular sources of mid-infrared and terahertz radiations. Moreover, ultrafast optics related to advanced materials, nonlinear optical properties of materials, far infrared spectroscopy, ultrafast optics, carrier dynamics in materials would also be featured topics of the discussion. Overall, the aim of the symposium will be to bring together eminent National & International scientists from universities, research institutes, and industries on a single platform to share their knowledge and showcase their research in the emerging area of optical materials and photonics.

Odisha Centre for Geriatrics and Gerontology of Gangadhar Meher University, Sambalpur, Odisha organized a workshop on "Hands on Actigraphy" on 28th July 2022 at LG-1 of GMU. The workshop was organized in collaboration with the Centre for Translational Chronobiology (CTC), Pt. Ravishankar Shukla University, Raipur. In the workshop, Prof. Arti Parganiha, the Coordinator of CTC, was present as a resource person and subject expert.

Importance of Workshop

The Odisha Center for Geriatrics and Gerontology (OCGG) at Gangadhar Meher University (GMU), Sambalpur is the first-ever center in the field of Geriatrics and Gerontology in Odisha. The Center was established in 2020 with financial assistance from the World Bank-funded "Odisha Higher Education Programme for Excellence and Equity" (OHEPEE) which focuses on interdisciplinary research on the social, psychological, and biological aspects of the elderly persons of Odisha.

One of the core objectives of the Center is to determine the sleep quality and cognitive abilities of the elderly population in Odisha. Therefore, the workshop has significant importance to the study of sleep quality measurement for the elderly population. Actigraphy is a non-invasive technique that is used to assess objective sleep variables and the rest-activity cycle of human subjects.

Proceeding of the workshop

The workshop began at 11:00 AM along with the introduction of the theme by Prof. Arti Parganiha.

Prof. Arti Parganiha elaborated in her lecture on the Application of Actigraphy-based output in various groups of subjects, such as seemingly healthy humans, cancer patients, and subjects with obstructive sleep apnea in the study area of Raipur. She also elaborated on the different parameters which are associated with the sleep quality in human subjects. She emphasized the importance of two rhythm parameters, i.e., autocorrelation coefficient at 24 hours ($r24$) and dichotomy index ($I<0$). She also highlighted the challenges faced during her studies. During the hands-on training session, she explained how to study the sleep-wake rhythms in human subjects using Actiwatch - MotionWatch8. She demonstrated how to configure the MotionWatch8 on a PC for data collection and how to retrieve the data of MotionWatch8 using

the software. She explained in detail the MotionWatch8-derived important sleep variables, Non-Parametric Circadian Rhythm Analysis (NPCRA), and the 24-hour activities of subjects. She explained the uses and operations of MotionWare Software.

During the deliberation, Prof. Parganiha suggested some points to incorporate into the OCGG study. The points are:

a) To check the normality and homogeneity of data,
b) To make a protocol that includes a selection of area, subjects, inclusion and exclusion criteria for Actigraphy study,
c) Only trained persons should operate the MotionWatch8.

Participants

In the workshop, the participants were PI, Co-PI, Research Associate, Research Assistant, and Office Assistant of OCGG and other faculties from the School of Anthropology and School of Botany.

Abstract

Objective: The study was conducted with an objective to prophesy the spiker's performance on the basis of anthropometric characteristics.
Variables: In the study, Spiker's Performance was selected as dependent variable (DV) and selected anthropometric characteristics i.e. SH (Spiker's Height), SW (Spiker's Weight), SAL (Spiker's Arm Length), SFAL (Spiker's Fore Arm Length, SUAL (Spiker's Upper Arm Length), SUAC (Spiker's Upper Arm Circumference), SWC (Spiker's waist Circumference), SHC (Spiker's Hip Circumference), SLL (Spiker's Leg Length), SLLL (Spiker's Lower Leg Length), STC (Spiker's Thigh Circumference) and SCC (Spiker's Calf Circumference) were observed independent variables (IV).
Subjects: For the purpose of the present study, 75 spikers were selected as subjects from interuniversity level volleyball tournament organized in India.
Statistical Analysis: To find out relationship between Dependent Variable (Spiker's Performance) and Independent Variables (selected Anthropometric Characteristics), product moment correlation and multiple correlations were applied. For the prophecy of Dependent Variable (Spiker's Performance) on the basis of Independent Variables (selected Anthropometric Characteristics), multiple regression equation was applied.
Conclusions: For the prophecy of Dependent Variable (Spiker's Performance) on the basis of Independent Variables (selected Anthropometric Characteristics) two regression models are established. Established regression models are: (1) Spiker's Performance = -35.586 +.667 X Spiker's Arm Length and (2) Spiker's Performance = -23.512 +.458 X Spiker's Arm Length + .210 X Spiker's Upper Arm Circumference.

Introduction

Volleyball is a team game in which two teams of six players are separated by a net. Each team tries to score points by grounding a ball on the other team's court under organized rules. It has been a part of the official program of the summer Olympic games since 1964. In India it was in the year 1952 that the first national championship was held at Chennai (Uppal, A. K., & Satyanarayana, V.). Anthropometric has been used for identification and understanding human physical difference as an early tool of physical anthropology. Anthropometry is derived from a Greek word anthropos which means "human" and metron which means "measure". Anthropometry involves the systematic

 DOI: 10.52228/JRUA.2022-28-2-6

measurement of physical properties of human body. A French mathematician was the first known person to use the term "anthropometric or anthropometry," the measurement of man dates back to ancient civilizations and is the oldest form of measurement. It was of great interest in ancient India and later in Egypt where study was undertaken to find one part or component of the body that would predict or become common measurement of all body parts. In Egypt, for example the length of the middle finger was considered a common measure of all body proportions. For instance, 5 finger length to knee, 10 to the pubic arch and 8 to the length of the arm reach. The Greeks were experts in body proportions. Not only in the game of volleyball, but in all the games, there is significant contribution of anthropometry. In different games, players play at different playing positions with different specialty, as a results different anthropometric measurements are required at different positions, due to differential nature of requirement.

Objective of the study

The objective of the study was to prophesy spiker's performance on the basis of anthropometric characteristics.

Variables of the study

For the purpose of the study, Spiker's Performance was selected as dependent variable (DV) and selected anthropometric characteristics i.e. SH (Spiker's Height), SW (Spiker's Weight), SAL (Spiker's Arm Length), SFAL (Spiker's Fore Arm Length, SUAL (Spiker's Upper Arm Length), SUAC (Spiker's Upper Arm Circumference), SWC (Spiker's waist Circumference), SHC (Spiker's Hip Circumference), SLL (Spiker's Leg Length), SLLL (Spiker's Lower Leg Length), STC (Spiker's Thigh Circumference) and SCC (Spiker's Calf Circumference) were observed independent variables (IV).

1. Subjects of the study

The study included the subjects who participated in Inter-university level Volleyball Tournament organized under the banner of Association of Indian Universities in India. A total of 75 male spikers were purposively selected for the study. The age of the subjects ranged from 18 - 28 Years.

2. Statistical Analysis:

To find out relationship between Dependent Variable (Spiker's Performance) and Independent Variables (selected Anthropometric Characteristics), product moment correlation and multiple correlations were applied. For the prophesy of Dependent Variable (Spiker's Performance) on the basis of Independent Variables (selected Anthropometric Characteristics), multiple regression equation was applied.

In this table value of standardized residual shows the outliers of the residual. In assumption of application of multiple regression, there should not be any outliers of the residuals and the minimum value of standardized residuals should not be less -3 and the maximum value should not be above +3. In this table, the minimum value of standardized residual is -2.616 and the maximum value of standardized residual is 2.571. This proved that the standardized residuals lie in the expected range from -3 to +3. It is concluded that there is no outliers in the residuals.

Figure- 1: Figure showing Mean, Standard Deviation and normal curve of residuals in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics

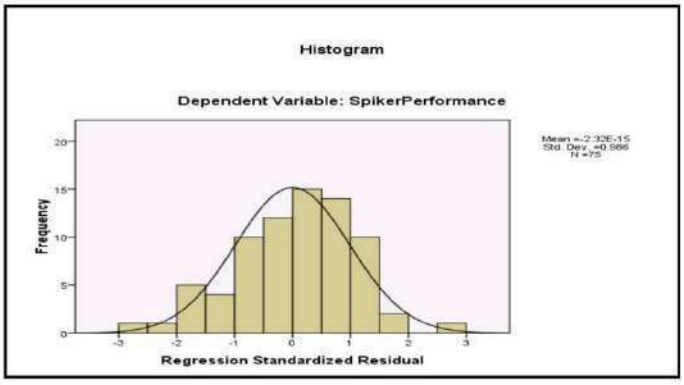

Figure- 1 shows Mean, Standard Deviation and normal curve of residuals in relation to the establishment of Models for the prognostication of Spiker's Performance on the basis of selected Anthropometric Characteristics. As per another assumption of application of multiple regression, the residuals should be normally distributed with mean 0 and Standard Deviation 1. The figure shows the

normality of residuals, mean is almost 0 and Standard Deviation is 0.986 (near to one), so the assumption, that residuals should be normally distributed with mean 0 and Standard Deviation 1is also fulfilled.

Figure- 2: Figure showing Normal P-P Plot in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics

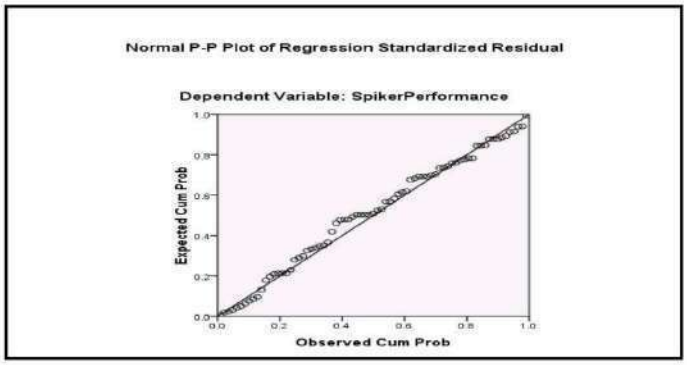

Figure 2 shows the Normal P-P Plot in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics. In this figure, a standard line is generated. In case of the normality of residuals, all the scores should be scattered near to this line. In this figure all the scores are scattered near to this line, this proved that residuals are normally distributed.

Figure- 3: Figure showing Constant Variance of residuals in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics

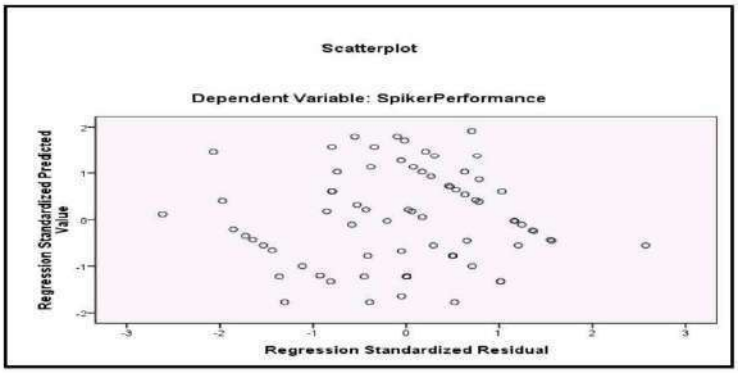

Figure shows Constant Variance of residuals in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics. The figure shows no clear-cut pattern, this shows that there is constant variance of residuals. This proves this assumption also fulfilled.

Table- 3 shows the Model Summary in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics. For the purpose, two models are established. First model is established on the basis of Spiker's Arm Length and second model is established by Indian Spiker's Arm Length and Spiker's Upper Arm Circumference. This table also shows Durbin - Watson Value. This value is shows that there is no strong positive and no strong negative relationship. This value away from 0 and 4 and the expected value is near to 2. So this assumption also is fulfilled.

Findings related to model- 1: In case of model 1, the R- value of .666 shows the coefficient of correlation between Spiker's Performance and Spiker's Arm Length. The value of R Square .443 shows that 44% Spiker's Performance is explained by Spiker's Arm Length.

Findings related to model- 2: In case of model 2, the R- value of .690 shows the coefficient of correlation between Spiker's Performance and Spiker's Arm Length & Spiker's Upper Arm Circumference. The value of Adjusted R Square .461 shows that 46% Spiker's Performance is explained by Spiker's Arm Length & Spiker's Upper Arm Circumference.

Table- 4 shows results of Analysis of Variance in relation to the establishment of Models for the prophesy of Spiker's Performance on the basis of selected Anthropometric Characteristics. The result of analysis of variance talks about the utility of established regression models. If the value of established model is significant in that case, the established model has a utility. In both models, the F value of 58.144 and 32.690 are found significant. This proved that the established models are useful

3. Discussion:

Similar type of study was conducted to prognosticate setter's performance on the basis of anthropometric characteristics and two models have been established by the authors (Singh, M. K and Choudhary, R.). Another study was conducted to predict Libros performance on the basis of anthropometric characteristics and three models have been established by the authors (Singh, M. K, Patel, R. K. and Choudhary, R.). Both the positions i. e. Setter and Libro belongs to the same game (Volleyball). Studies shows that different type of body dimensions are required to excel at a specific playing position. This proves that, specific regression model should be used to estimate player's performance at specific position.

EFFECTS OF SUB-MAXIMAL LOAD ON BODY COMPOSITION OF 31 TO 40 YEARS OBESE MALES

Pramod Dalal*
Dr. Rajeev Choudhary**

ABSTRACT

In this study, 60 obese men with BMI between(25 to 30) participated. The study's selection of body composition variables included body weight, fat percentage, and BMI. For the study, a sample of all obese male participants was taken, and they were divided into two equal groups: the control group (n=30) and the experimental group (n=30). Each of the three body composition factors was pre-tested on each group. The experimental group in the study completed a training regimen created by the researcher, while the control group was allowed to continue with their regular everyday activities. A 12-week continuous training regimen was followed in this investigation, after which samples from both groups were again collected. According to the data from the latest analysis, the submaximal load had a substantial impact on the experimental group's body weight, BMI, and fat percentage in connection to these variables of body composition, but not on the control group's variables. The data from the study were computed using ANCOVA.

Keywords : bodycomposition, age group, and submaximal Load.

INTRODUCTION

A sound mind and a healthy body are the foundations of human life. WHO defines "Health as a state of complete physical, mental, and social wellbeing, not merely the absence of disease or infirmity" (WHO, Constitution, 2021). A condensed definition of health states, "Health is the quality of life that enables the person to live most and serve best" (Vairavasundaram, Jany, &Itoo, 2020). Health is thus a level of functional efficiency of a living being and a general condition of a person's mind, body, and spirit. Most diseases have their origin in mind. A person can be referred to as healthy when his or her body is healthy, and the mind is clear and calm. Health is the foundation upon which rest the people's happiness and the nation's strength.

Nowadays, more than 90% of people are leading a mechanical life. They do not find time to care for their health and mind. Sound health and essential fitness are given less importance in the present-day world. With the availability of several modes of transport facilities and mechanization of industries, the proportion of people who lead sedentary lives has been increasing daily. Public health is influenced by their lifestyles, with dietary choices and regular physical activity being the two most essential aspects, regardless of sex, age, or place of origin. This poses a significant threat to an individual's health because it can increase or progress in the Risk of Obesity. The World Health Organization (WHO, 2006) has described Obesity as one of the most neglected public health problems, affecting every region of the globe. The epidemic of Obesity is a substantial health burden worldwide, and its impact is equally felt in developing countries as well (Sunyer, 2015).

Obesity is not only a physical condition in the current years but has emerged as a severe problem in recent years. It is believed that as age progress, the physical capabilities of the body start decreasing, and the person starts becoming obese. Exercise act as a medicine

to reduce obesity and keep the body healthy for a long time. The formation of one such exercise plan through a small training program for middle-aged youth has been presented in this study.

The study's objective was to determine the "Effects of sub-maximal load on body composition belonging to 31 to 40 years male obese of Mathura district of Uttar Pradesh".

METHODOLOGY

A total of 60 obese male subjects aged ranged (31-40) years were randomly selected for the study; out of the total number of subjects, two equal groups were formed. i.e., Group- A (n=30) and Group B Control (n=30).

SELECTION OF VARIABLES

Based on literary evidence, correspondence with the expert, and according to the scholar's understanding following variables were selected:

(a) Weight.
(b) Body mass index.
(c) Fat percentage.

CRITERION MEASURES

Bioelectrical impedance for fat muscle and hydration assessments analyzer was used to measure body composition variables. The instrument uses a scientific patented method of measuring bioelectrical impedance. A total of four electrodes were used (tetra polar). Two electrodes are applied to the hand and two to the foot. A low-level battery-operated electric current was passed through the body, and the impedance, phase, resistance, and reactance were measured.

TRAINING PROGRAM

The training program was imparted during morning hours to the subjects in the kanway gym in bank colony Mathura. Necessary instructions were given to the subjects before the administration of each test. Utmost care was taken to administer the selected submaximal resistance training program. Before and after the twelve-week treatment program, pre-test and post-test data were taken.

PROGRAM SCHEDULE

Days	Time 6:30-7:30	Warming up	Treatment program	Stretching & cooling down	Experimental group
Monday	60 Minutes	10 Min	40 Min	10 Min	Deadlift 3X10
Wednesday	60 Minutes	10 Min	40 Min	10 Min	Bench press 3X10
Friday	60 Minutes	10 Min	40 Min	10 Min	Half squat 3X10

Tuesday, Thursday, Friday, and Saturday was a rest day.

Note: - Control Group did not participate in any training programs and followed their usual schedule.

DESIGN OF THE STUDY

Pre-test and Post-test randomized-group design was used for the present study.

COLLECTION OF DATA

All the subjects of selected groups were assembled in the gymnasium hall. With the help of a bio-electrical impedance machine, data was collected by the scholar with the help of experts separately on different locations, which have been mentioned above in the pre-test and post-test manner.

PROCEDURE FOR ADMINISTRATION OF TEST

The sample comprises 60 male participants with body fat levels greater than 25%. The researcher divided the 60 sample individuals into two equal groups (n = 30), one of which was the control group. This group did not participate in the sub-maximal load training program and carried on daily. In contrast, the experimental group participated in the program three days a week for one

hour each morning, from 6:30 to 7:30 a.m, Each subject completed a body composition test, and the researcher documented their results. Following the completion of the 12-week training program, a second test was conducted to monitor any alterations in body composition.

STATISTICALANALYSIS

To find out the effect of sub-maximal load on body composition of 31 to 40 years obese males, Analysis of Covariance was used.

Results

Analysis of Co-variance (ANCOVA) table reveals that the F-value of 41.109 is found significant ($p<.05$). This shows that the significant difference is found between the adjusted means of experimental and control groups in relation to weight. The obtained partial eta squared value of .419 shows that 41.9% change in dependent variable (weight) is explained by independent variable (submaximal load).

This shows that the significant difference is found between the adjusted means of experimental and control groups in relation to body mass index. The obtained partial eta squared value of .450 shows that 45% change in dependent variable (BMI) is explained by independent variable (submaximal load).

This shows that the significant difference is found between the adjusted means of experimental and control groups in relation to fat percentage. The obtained partial eta squared value of .625 shows that 62.5% change in dependent variable (fat %) is explained by independent variable (submaximal load).

Summary table of training programme and its effect on different parameter in 31-40 age category obese male.

The above table reveals a significant difference in the weight, BMI, and fat percentage in the age category of 31-40 years obese male subjects.

DISCUSSION OF FINDINGS

Based on the findings of this study, we can conclude that the 12-week sub-maximal training program was very effective for the obese male in the 31 to 40 years age category. However, the training program was not very long, but the significant difference in selected variables shows that it can be very effective if the sub-maximal training can be regularly executed to improve the health of particular age category males. We can recommend a similar training program for another age category and transgender based on the above result.

A similar study was done by Cokorilo, N., Mikalacki, M., Korovljev, D., Cvetkovic, M., & Sarkar, S. Results showed significant group changes. As the age

progresses, the body composition also changes; muscle mass decreases by 1% every year after the age of 20, and increase in fat body mass. A highly significant difference was observed in the first and last groups. The older group possessed less muscle and fat body mass than the early age group. Another factor also identified by the study is that the marital status and consequences of menopause are also responsible for the changes in body composition. Findings concluded significant changes in women's body composition in various age groups.

Thomas, M. H., & Burns, S. P. results showed that the eight weeks of high-Frequency Training Group (HFT) increased lean body mass by 1.06 kg ± 1.78 kg (1.9%), and the Low-Frequency Training Group (LFT) increased lean body mass by .99 kg ± 1.31 kg, (2.0%). HFT showed strength improvements on the chest press were 9.07 kg ± 6.33 kg (11%), and hack squat was 20.16 kg ± 11.59 kg (21%). LFT showed strength improvements on chest press was 5.80kg ± 4.26 kg (7.0%), and hack squat was 21.83 kg ± 11.17 kg (24 %), and no meaningful differences between groups were significant. These results suggest that HFT and LFT of equal set totals result in similar improvements in lean mass and strength following eight weeks of strength training.
